Our Diagnostic Tests for Bartonella

All diagnostic assays are performed according to Standard Operating Procedures. We follow strict quality control testing standards to provide the best possible results.

Enrichment Culture + PCR \$125

Provides enhanced detection of Bartonella DNA missed by standard PCR detection methods. DNA sequencing and identification are included for positive results. Typical sample is 2ml of blood/EDTA. Final results will be reported out within 3 weeks of sample receipt.

Direct PCR \$50

Detects the presence of Bartonella DNA occurring at a detectable level. DNA sequencing and identification are included for positive results. Typical sample is 3ml of blood/EDTA. Results are reported out within 1 week of sample receipt.

Serology \$30

Tests for antibodies against *Bartonella henselae* or against *Bartonella vinsonii berkooff* (dogs only). Requires 3ml serum. Results reported within 1 week.

Tissue Processing \$75

Tissue samples must be carefully prepared for testing and require an additional processing fee.
